#64A—PINK HEATHER Alyssum Only ALL-AMERICA SELECTION Winner for 1959

New Heather-pink Alyssum blooms into soft lavender-pink, striking a deeper shade in cool climes, and ranging to delicate tints during hot dry mid-summer. Pink Heather has the vigor and blooming habits of Violet Queen and Little Gem. Combine them. Plants make attractive 6-inch domes of color for edging, borders, walks, pots.

Most easily grown of flowers, just sow where you want it and be prepared for bloom 6 weeks later until frost. Pink Heather will be the most widely discussed flower in '59. Don't miss it. Pkt. 35c; 1/16 oz. \$1; 1/4 oz. \$3.

An Entirely New Petunia Class is Born An All Double Multiflora . . . It is Happy in the Garden

#1560—PARK'S CHERRY TART is the first of a new race of F₁ Hybrid, All Double Petunias. The compact, mound-like plant habit, and the terrific amount of medium blooms set it apart from all other doubles. Fluffy full double flowers make it superior to the single multifloras for beds or borders.

We recommend it to gardeners the country over. It is easily, quickly grown from seeds, widely adapted, remains trim and neat even under adverse conditions.

Warm rose-pink is brought vividly to life by a sharp white variegation; a pleasing new color to grace your garden. We are very proud of Park's Cherry Tart. It is the fashion flower of 1959, a milestone in Petunia breeding. Won't you try it? 100 seeds 50c; 200 seeds \$1.00; 500 seeds \$2.00; 1/128 oz. \$5.50.

"My Father in Heaven, help me never to forget Thy Love to me. It comes with the light of the morning, and it remains with the light of the stars of the night. DEAR PATRON FRIENDS

No man is too great, none too small to find joy and therapy in the occupation of gardening. Plant the seeds, see them spring into life. It is an experience ever new and refreshing. In it you join the Great Creator in the miracle of life, and through it His peace can come into your heart.

As your plants grow and flower, relax and enjoy them. Take time out to see them with more than a passing glance, or as a setting for other things. Look into the wondrous beauty of a flower with its intricate mechanism for reproducing itself. God gave us flowers that we might "Consider the lilies of the field. They toil not, neither do they spin." Flowers are for our pleasure and therapy. Invest some time in gardening. You will find its tonic soothing, your perspective more accurate, and blood pressure lower. You will find Peace in the soul too, which when multiplied by enough of us, begets peace in the world.

In these pages, you will find the most advanced varieties, the finest strains of those very useful, easily grown flowers well known to every gardener.

Here too, are the unusual, exotic houseplant and greenhouse seeds, especially lovely and valuable perennials, and rare annuals found in few other offerings.

Some of these are exacting in their requirements; and will challenge your gardening skill, but if you have patience, will reward you with incomparable beauty, and with the personal satisfaction of true conquest.

With the advent of Park's Horticultural Milled Sphagnum Moss and the "Sure Fire" seed starter kit, requirements for germinating, even the very tiny and so called difficult species are easily met. We are very proud to offer these aids to you, for we feel this has at last made practical the starting of all kinds of seeds in the home. A "green thumb" for every gardener.

This year we have three great exclusives never before offered! Park's Cherry Tart Petunia, first of a new type; Begonia Cinderella, touched by a magic wand; and named varieties of Double Gloxinias, beautiful horticultural triumph. These are available only from Park, and along with many other choice new varieties are in keeping with Park's tradition of All the Best of Old and New.

Happiness we dream of having later is elusive. Take the joy each day affords as it comes. Include gardening in your life. You will find each day presents more opportunities for happiness.

We wish for you, all success and pleasure in your gardening adventures.

Floricordially yours,

GEO. B. PARK, President

TO INSURE YOUR SUCCESS

1—The Seeds We Sell Are All of the New Crop.

Grown by specialists in many parts of the world, TESTED FOR GERMINATION AND PURITY. Sure to grow and give you the finest results.

It takes no more time and effort to grow seeds from the best strains, so start with the best and save disappointment at flowering time by ordering direct from Park.

2—To Prevent Disease and "Damping Off".

Nearly all soils contain harmful fungi, which if not controlled, attack the seed and cause what is known as "Damping Off" (This usually happens just before or just after the baby plants emerge from the ground). Also there are present on the surface of most seeds certain pathogenic fungi which, if not destroyed, cause the seed to decay. (This is especially true in cold damp weather.) These often account for poor, uneven stands and weak, non-vigorous young plants. The use of Park's Horticultural Milled Sphagnum Moss eliminates "Damping Off." Prevents harm from overwatering, and reduces the need for constant watching, and expert judgment. Now, you can plant seeds with confidence.

GINGER SNAPS

(Panorama)

F₂ Hybrid Outdoor Snapdragons Developed by Mr. Charles Weddle

One of the *greatest hybridists of our time, during ten years of intensive breeding work.

Ginger Snap was created with the needs of the home gardener as a specific aim. It is our firm belief that this is the finest Snapdragon ever offered for the home gardener. Thus Mr. Weddle has eminently accomplished his mission.

The plants build a heavy foundation before starting to bloom, thus they are a week or two later than Carrousel or Hit Parade. The revelation comes when bloom begins. The plants branch from the base, providing a multitude of heavy cane-like 2½ ft. stems to hold the heavy spikes of extra large florets. They need no staking. The colors are very bright and clear with a glowing sheen to glisten in the sun. The plants are of uniform height, so look well in the border. Ginger Snaps take adverse weather in stride and the heavy textured flowers keep well. Cut all you want, for if kept picked, the plants bloom and improve until the hard freezes of late fall. Ginger Snaps in your garden will be the envy of the neighborhood.

Try some this year. They're in highest fashion.

- 114A—Ginger Bronze. Lovely shade of rosy bronze.
- 108A—Ginger Lavender. Lovely rosy-lavender most ladies like.
- 109A—Ginger Pink. An exquisite shade of bright clear pink.
- 110A—Ginger Red. Deep glowing crimson-scarlet, very bright. The most attractive red in Snapdragons.
- 111A—Ginger White. Ivory white with creamy mouth.
- 112A—Ginger Yellow. Shining deep yellow.
- 113A—Ginger Snap Panorama Blend. A formula mixture of above F₂ Hybrid colors with other shades added.

PRICES: All Ginger Snaps above Pkt. 25c; 3 Pkts. 65c. One Pkt. each of all 5 colors \$1.00.

Extra Early, Colorful

121A—CARROUSEL. F₂ Hybrid Snapdragon. Like a merry-go-round on a color wheel! All colors present in Snapdragons are represented in this fine mixture. Plants are extra early, fast growing and uniform in height at about 28" with flowers evenly spaced on long stems. We recommend using Carrousel in conjunction with Ginger Snaps to lengthen the season of bloom. Pkt. 25c; 1/16 oz. \$1.00; 1/8 oz. \$1.75.

* Mr. Weddle is eminent for his work on F₁ Hybrid Petunias, some of his most recent creations being Comanche, Paleface, Firedance, Prima Donna to mention but a few. He was the first American to discover the secret of producing All Double Petunias.

SELECTING AND SOWING

If you wish seeds to sow in a garden bed or to present to children, or if you have had but little experience in raising flowers from seeds, select such flowers as Alyssum, Aster, Balsams, Cosmos, Calendula, Candytuft, Oriental Pinks, Gailardia, Helianthus, Marigold, Mignonette, Bedding Petunia, Pansy, Phlox, Ricinus, Scabiosa, Nasturtium, Valerian, Verbena and Zinnia; for vines get Coboea, Cypress, Dolichos, Gourds, Morning Glory, Thunbergia. Even in sowing these it is well to prepare the bed carefully in a sunny exposure; place a low board frame around it and after sowing, water and cover with a newspaper until plants appear. If you sow seeds in the open with full exposure to rain, wind and sun, you should not complain if few of the seeds become plants.

TO INSURE SUCCESS. Many failures with seeds are due to lack of knowledge of the time required by the seeds to germinate. Study the table on pages 65 and 66 to avoid failures from this cause. Follow instructions in the "Gardener's Handbook."

Seedlings Destined for Park Trial Gardens where from planting to maturity, they'll be carefully evaluated. We feel that one of our most important services is represented by these trials, conducted solely to compare available "strains"

"You Get the Best from Park."

Petunia Trials

Several hundred samples from growers the world over were carefully evaluated. Sarah Chinnners, Park plant breeder, is shown noting "Sugar Plum." Side by side comparisons like this, show vividly the marked superiority of the F₁ Hybrids.

Part of Park's Annual Trials

Each year over 1000 samples are grown and evaluated. The seeds supplied you under the Park label are grown by the specialist who is doing the best job on that particular variety. We observe trials in the north, mid-west and west too.

Latest Developments, Highest Quality Double Gloxinia Plant Production under the watchful, careful eye of Klaus Neubner, Park plant breeder and production supervisor. New varieties and maintenance of quality in standard kinds require constant, skillful control.

F₁ Hybrid Petunias

Bring A New Era in Home Beautification

So dependable you can paint your garden scene with them, assured it will be just as you planned, remaining that way all season.

What are F₁ Hybrids?

F₁ Hybrids are produced by carefully hand crossing individual blooms from two selected inbred parents which in turn were especially developed for the superior qualities they impart to the cross.

These Superior Qualities are:

Greater Vigor. Faster, stronger growth, quicker bloom, larger flowers, brighter colors and heat resistance to carry through the summer in good condition.

Greater Production. More plant—More Flowers.

Greater Uniformity. Flower color and plant habit show almost no variation, so you can be sure of the result.

New Colors. Are offered here which were not possible except as F₁ Hybrids.

Most Modern. An F₁ Hybrid Petunia has won an All America Award almost every year since 1952. F₁ Hybrids represent a great advance in Floriculture, perhaps the most significant of our generation.

For more carefree gardening, easier, more luxurious living, plant Free Blooming F₁ Hybrid Petunias.

Use Park's "Sure Fire" Starter Kit Plan. You'll find Petunias easy and certain.

Petunias stand pre-eminent as a hardy, beautiful, all purpose flowering plant. Readily started from seed, they soon come into bloom, becoming a glowing mass of exquisite, showy, and deliciously fragrant flowers, in bloom from early summer until frost. They may be started in fall or early winter indoors to make blooming window plants for late winter and very early spring. *Don't omit these beauties from your list.*

GIANT DOUBLE PETUNIAS Now in Complete Color Range — and Easy to Grow

Intensive work continues on the All Double Petunias, and each year they improve in size, plant habit and color range. The seeds are necessarily very expensive due to the fact that they have to be carefully hand pollinated and there is real art and scientific knowledge required to produce seed which will give consistently Double flowers. The seed are smaller and the seedlings weaker than the Single kinds, so require more care in starting. **EASY TO GROW.** Sow the seeds on Milled Sphagnum Moss in accordance with directions we provide with the moss. Moisture control is simplified, "Damping

Off" eliminated. Park's "Sure Fire" Starter Kit (See Pg. 11) makes growing Double Petunias easy and sure. The seeds are very small, and the 25c pkts., contain only a few seeds. The larger Pkt. is the better buy.

After the All Double Petunias get past the baby plant stage, they are quite vigorous and can "take it" even where summers are hot. Outstanding in beds, borders or as accent points.

PETUNIA CULTURE

This is covered more fully on page 11 of "The Gardener's Handbook" sent free with your order. We treat all seeds of Petunias with Semesan to help prevent "damping off" which together with covering too deeply causes more failures than anything else. The seed may be sown indoors about 8 weeks before your usual outdoor planting time to give you blooming plants in early June, and because the seed are small should be sown in boxes and transplanted even when planting late.

We are using and enthusiastically recommend Milled Sphagnum Moss for Petunia Seed Sowing.

Park's "Sure Fire" seed starter kit takes the "guess work" out of growing Petunias from seeds.

GIANT PANSIES

A PARK SPECIALTY

Pansies are well and favorably known, so that a description of their exquisite beauty, and usefulness in the garden is unnecessary. They are simply indispensable, and if we were to name a half dozen of our best seedling flowers, the Pansy would be one of them. There is, however, much difference in the strains, some being greatly superior in vigor and free-blooming quality to other plants as well as the great size, form, variety, and richness of colors and variations. We are pleased to say that the seeds we offer are from Pansy specialists, all of the new crop, and cannot be surpassed in quality, regardless of claim or price.

Zvolanek's Multiflora Sweet Pea

The Best SWEET PEAS

The Sweet Pea has all the good qualities of a perfect annual for general cultivation. It is easy of culture, growing in almost any soil and sunny situation, begins to bloom when small and, if freely cut, will continue for a long period. Flowers are rich and colorful, deliciously fragrant, and are freely borne on long stems. Excellent for cutting. CULTURAL DIRECTIONS pg. 10 "Gardener's Handbook."

How Good Can a Sweet Pea Get?

We feel that the fine varieties offered below are the best Sweet Peas grown today. They are the result of years of painstaking selection on the part of William Zvolanek, veteran California Sweet Pea breeder. These three types of multi-flowering Sweet Peas have terrific vigor which manifests itself in an abundance of extra long (18-20") pencil stems, each carrying 5-6 even up to 8 flowers instead of the usual 3 or 4; and in marked heat resistance.

Zvolanek's Early Multiflora.

Earliest to bloom, yet vigorous and heat resistant. Under proper culture yields the finest Sweet Peas it is possible to grow. 1976—Rocket. Very fine scarlet-rose pink. 1975—Supreme. Finest rich cerise. 1964—White, 1963A—Giant pink. 1964A—Mid blue. 1973—Early Multiflora Mixed. A complete, balanced blend of about 30 varieties in all Sweet Pea colors.

Zvolanek's Flori-bunda SPRING FLOWERING

—Resists Heat.

Especially for outdoor planting, these bloom two weeks before the late type and are very strong in growth and heat resistance. 1990—Flori-bunda Mixed. Pink, lavender, purple, white, cream, rose, salmon, cerise, carmine, red, blue are all represented in this choice blend of colors.

Zvolanek's Plenti-flora (Summer Flowering).

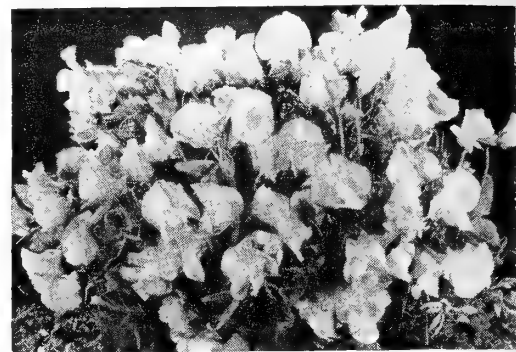

Growth is very strong and lush. Does well everywhere. 1967—Plenti-flora Mixture. A complete full color range.

The color, experts thought, could not be created.

Are Sweet Peas Hard to Grow in Your Climate?—Here's The Answer.

NEW HEAT RESISTANT SWEET PEAS

CUTHBERTSON'S STRAIN Flowers in Hot Weather

Not only do they continue blooming long after hot weather has come and other sweet peas have died, but they begin blooming two weeks ahead of the Standard Spencers. The flowers are of the true Spencer Orchid Flowering type with long stems and wavy petals. Large and deliciously fragrant, they are produced in great quantity on plants of exceptional vigor. The colors are bright and clear. If you grow only one strain of Sweet Peas this is the most practical.

2002—CUTHBERTSON'S HEAT RESISTANT SPRING FLOWERING BLENDED MIXTURE. A balanced blend containing the above varieties and all other named varieties in this class to give a most complete color range. Pkt. 15c; Large Pkt. 25c; ½ oz. 35c; oz. 60c; ¼ lb. \$2.00.

A Handsome Blooming Shrub

2481—THE RARE FRANKLINIA Alatomaha. hp. 12 ft. Leaves scarlet in late Fall. Wax white blossom cups 4 in. across in Autumn. 8 seeds 25c; 40 seeds \$1.00; 100 seeds \$2.00. Seedling plants 8-12". Each \$1.30; 3 for \$3.60.

1977—EARLY FLOWERING

(Christmas Spencer) Flowering a month earlier than Giant Spencers, with large waved flowers, on long stems. Recommended where spring is late, for greenhouse culture, for winter bloom outdoors in the deep south.

Choice named varieties blended to give a balanced color collection. Pkt. 15c; 25c; ½ oz. 40c; oz. 75c; ¼ lb. \$2.25.

1966—Color Carpet Dwarf Mixed, Cuthbertson Cupid. 6" tall, compact mounds smothered with huge waved blossoms. Pkt. 25c; ½ oz. \$1.; oz. \$1.50.

2003—Carol, Clear Pink; 2004—Jimmy, Scarlet; 2005—Janet, Pure White; 2006—Frank G. Lavender; 2007—Tommy, Mid Blue; 1992—William, White with Pink picotee edge. Pkt. 15c; 25c; 1 oz. 85c.

1965—CUTHBERTSON'S FLORIBUNDA MIXED. Extremely vigorous, long stemmed, heat resistant; all the attributes of regular Cuthbertson's, but will, under proper conditions, produce 5-6 blooms per stem of better formed flowers. Should replace the older strain. Pkt. 25c; ½ oz. 60c; oz. \$1.00; ¼ lb. \$3.00.

1962—NEW GIANT HEAT RESISTANT SWEET PEAS MIXED.

In originator's tests these, Giant Spencers, Earlies and Cuthbertson's were given identical care. These produced long stemmed flowers abundantly thru July into August, long after the others failed. Won't you try them? Pkt. 25c ½ oz. 75c; oz. \$1.35.

CHOICE FLOWER SEEDS—PART ONE

ANNUALS and PERENNIALS

Blooming the First Season

ANNUAL FLOWERS are those which grow, bloom, seed and die in one season. There are attractive annuals for every purpose. Some are fine for cutting, others for beds or borders, rock plants and climbers. We have listed in Part 1 the finest of all Annuals, and the perennials which may be treated as annuals in that they will bloom the first season from seed.

HARDY FLOWERS are those which may be sown in early spring as soon as the ground may be worked, or in fall to come up with the first breath of spring for earlier blooms. Hardy perennials and biennials may be planted in July or August and transplanted to permanent location about 1 month before frost where they live over with the protection of a mulch to give bloom in the spring. We think it best to sow perennials and biennials in the spring so that they can become better established before winter.

HALF HARDY FLOWERS listed with the symbol hh may be started early indoors for early bloom, or they may be planted outside when danger of frost is over. Half Hardy perennials need winter protection in the Northern states.

The varieties listed in Part III are all hardy perennials or biennials, and may be sown in spring or midsummer. We recommend sowing perennial seeds in the Spring. Seeds germinate better in the cool weather than in the heat of mid-summer, and the longer growing period produces larger plants which winter over easily. THE HARDY PERENNIALS AND BIENNIALS LISTED IN THIS PART will bloom the second year from seed. See page 20 for symbols used.

PRIMROSE CULTURAL NOTES

Sow in pots or pans as early in the year as possible, water, cover with glass and place outdoors where the soil will be frozen. When milder weather sets in bring into gentle warmth and seeds will germinate freely. Freeze seeds in ice cubes for similar effect. Allow plenty of time—seeds are often tardy. Primulas need partial shade, rich, porous soil, and a mulch of pine needles or salt hay to keep roots cool—this seems the answer to growing them in warm climates. They like the east side of a hill, shelter from wind, good drainage.

TO CONTROL "DAMPING OFF"

"Damping Off" is a microscopic fungus growth which attacks the baby plants just as they emerge from the ground or while they are still small, and is the reason for many failures which are blamed on the seed, especially where very small seeds are concerned. It may be overcome by treating the seed (We do this for you as an extra "Park Service"), and sterilizing the soil. (Bake in the oven 2 hrs. at 200° 24 hrs. before planting.) Sphagnum moss is a sterile antibiotic material in which fungi and bacteria cannot live. We have found sowing seed in Sphagnum sifted on sterile soil a positive Damp-off control.

Where sterilizing is impractical, as with an outdoor bed or cold frame, spray the soil, just as the seedlings appear, with Semesan solution (½ oz. to gallon of water). We offer **SEMESAN** in ¼ lb. pkg. \$2.50. This is enough to spray 480 sq. ft.

GIANT DAHLIAS

Are easily grown from Park's strong tubers.

THE VARIETIES LISTED here are selected with painstaking care from the thousands of varieties in cultivation. Those listed on these pages are the best growers, freest bloomers, and those listed as mammoth will give the largest flowers Dahlias can produce. Growing show dahlias does take careful disbudding, and proper care.

KEEPING CUT DAHLIAS. Strip the foliage except at the top, recut the stem and immerse in water as hot as the hand will bear. When water cools transfer the Dahlias to cold water and place in the cellar overnight. Treated thus they will keep for several days and increase in size.

DAHLIA CULTURE. This subject including how to prevent disease and get rid of insect pests is covered fully in "The Gardener's Handbook." For bedding effects plant on or a week before frostproof date. For exhibition blooms plant late (May and June). Late planting brings the plants into bloom during late summer and fall when the cool temperatures promote better blooms.

GLOXINIA CULTURE. For a succession of bloom start bulbs every two weeks from January thru April. Pot with crown protruding, using equal parts of rich fibrous loam, sand, and leaf mold. A warm temperature (70 degrees) is required or bulbs will rot. Insure good drainage by placing gravel in bottom of the pot. Water sparingly until growth starts, then plenty of water should be given and care taken not to wet the leaves. An eastern exposure, well sheltered from strong wind and sun suits them. After blooming, withhold water to ripen the tubers, then store in sand for winter at 45 degrees.
